<b>1</b>	<b>Introduction</b>	<b>1</b>
	Bibliography . . . . .	5
<b>2</b>	<b>Experimental Techniques</b>	<b>9</b>
2.1	Introduction . . . . .	9
2.2	Commercial systems . . . . .	10
2.2.1	PPMS: heat capacity measurements . . . . .	10
2.2.2	MPMS: SQUID magnetometry . . . . .	13
2.3	Dilution Refrigerator . . . . .	15
2.3.1	Early progress of low temperature physics and technologies	15
2.3.2	Properties of $^3\text{He}$ - $^4\text{He}$ mixtures . . . . .	17
2.3.3	The refrigeration circuit . . . . .	19
2.3.4	Minikelvin 126-TOF model from Leiden Cryogenics . . . . .	21
	Bibliography . . . . .	22
<b>3</b>	<b>Development and characterization of SQUID...</b>	<b>25</b>
3.1	Introduction . . . . .	25
3.2	SQUIDs and their applications . . . . .	26
3.2.1	Quantum behavior of a Josephson junction . . . . .	27
3.2.2	dc SQUID . . . . .	29
3.2.3	Noise in a dc SQUID . . . . .	31
3.2.4	SQUID read out . . . . .	33
3.2.5	SQUID applications . . . . .	34
3.3	Micro-SQUID susceptometry . . . . .	35
3.3.1	Magnetic susceptometry . . . . .	35
3.3.2	Use of a SQUID as external detector of the susceptometer: basic operation . . . . .	36
3.4	Previous examples and designs of $\mu$ SQUID susceptometers and...	38
3.4.1	Development of microSQUID ac susceptometers. Previous work and background . . . . .	40
3.5	Characterization of the H32 microSQUID susceptometer . . . . .	43
3.5.1	Background signal . . . . .	45

3.5.2	Scaling function . . . . .	47
3.6	Third generation of micro SQUIDs: Characterization and development . . . . .	52
3.6.1	Introduction: common characteristics . . . . .	52
3.6.2	Measurement of basic characteristics . . . . .	53
3.6.3	Noise measurements . . . . .	56
3.6.4	Background signal . . . . .	60
3.6.5	Background signal compensation . . . . .	64
3.7	Fabrication and characterization of nanosusceptometers . . . . .	68
3.7.1	Introduction . . . . .	68
3.7.2	Basic concept . . . . .	69
3.7.3	Experimental realization . . . . .	71
3.7.4	Nanoloop characterization . . . . .	71
3.7.5	Measurement of a Permalloy sample . . . . .	72
3.7.6	Measurement of a Mn <sub>12</sub> microcrystal . . . . .	73
3.8	Summary and conclusions . . . . .	75
	Bibliography . . . . .	76
<b>4</b>	<b>Realization of molecular CNOT and SWAP quantum gates</b>	<b>83</b>
4.1	Introduction . . . . .	83
4.2	Experimental requirements for the realization of quantum gates . . . . .	85
4.2.1	Two well defined and coherent qubits . . . . .	85
4.2.2	Coupling between qubits . . . . .	85
4.2.3	Addressable qubits . . . . .	86
4.3	Experimental candidates for quantum gates . . . . .	87
4.3.1	NMR on solutions of cytosine in D <sub>2</sub> O . . . . .	87
4.3.2	Optical cavities . . . . .	87
4.3.3	Ionic traps . . . . .	87
4.3.4	Superconducting qubits . . . . .	89
4.3.5	Semiconductor quantum dots . . . . .	89
4.3.6	Nitrogen-vacancy centers in diamond . . . . .	90
4.3.7	Single Molecule Magnets . . . . .	90
4.4	Synthesis and main characteristics of spin dimers . . . . .	90
4.4.1	Synthesis and architecture of spin dimers . . . . .	91
4.4.2	Study of lattice and non magnetic behavior. Heat capacity measurements . . . . .	92
4.5	Theoretical model . . . . .	94
4.5.1	Spin Hamiltonian . . . . .	94
4.5.2	Kramers ions . . . . .	96
4.5.3	Non-Kramers ions . . . . .	97
4.5.4	Partition function and observables . . . . .	98

4.6	Experimental study of molecular qgates with asymmetrical environment . . . . .	102
4.6.1	Main characteristics of a Tb <sub>2</sub> dimer . . . . .	102
4.6.2	Magnetic susceptibility and specific heat measurements . . . . .	103
4.6.3	Further measurements . . . . .	106
4.6.4	EPR experiments: CNOT and SWAP transitions . . . . .	107
4.7	Experimental study of molecular qgates with asymmetrical environment . . . . .	110
4.7.1	Main characteristics of a Dy <sub>2</sub> dimer . . . . .	110
4.7.2	Magnetic susceptibility and specific heat measurements . . . . .	111
4.8	Experimental study of molecular qgates with different components: ErCe . . . . .	115
4.8.1	Main characteristics of ErCe dimer . . . . .	115
4.8.2	Measurements on YCe and ErLa monomers . . . . .	116
4.8.3	Measurements on the ErCe dimer . . . . .	118
4.8.4	Study of coherence time . . . . .	123
4.9	Conclusions . . . . .	123
	Bibliography . . . . .	125
<b>5</b>	<b>Molecular prototypes for 3-qubit gates</b>	<b>129</b>
5.1	Introduction . . . . .	129
5.2	Universal 3-qubit gates: Toffoli and Fredkin . . . . .	130
5.3	Quantum error correction . . . . .	131
5.4	Experimental requirements for quantum gates . . . . .	135
5.5	Synthesis and main characteristics of spin trimers . . . . .	135
5.6	Spin Hamiltonian . . . . .	137
5.6.1	Single ion Hamiltonian . . . . .	137
5.6.2	Spin-spin interaction terms . . . . .	139
5.6.3	Spin Hamiltonian for CuLaCu . . . . .	139
5.6.4	Spin Hamiltonian for CuErCu . . . . .	140
5.7	Experimental study of molecular 3-qubit gates . . . . .	140
5.7.1	CuLaCu . . . . .	140
5.7.2	CuErCu . . . . .	143
5.8	Conclusions . . . . .	145
	Bibliography . . . . .	146
<b>6</b>	<b>Quantum spin relaxation in molecular dimers</b>	<b>149</b>
6.1	Introduction . . . . .	149
6.2	Relaxation processes . . . . .	150
6.2.1	Spin-lattice relaxation mechanisms . . . . .	151
6.2.2	Experimental methods for measuring relaxation processes	155
6.3	Relaxation processes in a single lanthanide ion . . . . .	157

---

6.3.1	ErLa . . . . .	157
6.3.2	DyLa . . . . .	160
6.4	Relaxation processes in molecular dimers . . . . .	164
6.4.1	Er <sub>2</sub> . . . . .	164
6.4.2	Dy <sub>2</sub> . . . . .	167
6.5	Summary and conclusions . . . . .	170
	Bibliography . . . . .	172
<b>7</b>	<b>Experimental study of molecular qubits on surfaces</b>	<b>175</b>
7.1	Introduction . . . . .	175
7.2	Molecular deposition: DPN technique . . . . .	176
7.3	Coupling of Single Molecule Magnets to superconducting circuits	177
7.4	Mn <sub>12</sub> measurements on 30 μm loop SQUIDs . . . . .	178
7.4.1	Mn <sub>12</sub> bz molecules . . . . .	178
7.4.2	Fabrication of Mn <sub>12</sub> bz arrays by DPN lithography . . . . .	179
7.4.3	Estimation of the number of Mn <sub>12</sub> bz molecules deposited with DPN . . . . .	184
7.4.4	ac susceptibility measurements . . . . .	184
7.4.5	Discussion . . . . .	187
7.5	Dy <sub>2</sub> measurements on 30 μm loop SQUIDs . . . . .	187
7.5.1	Dy <sub>2</sub> molecules . . . . .	187
7.5.2	DPN lithography of Dy <sub>2</sub> . . . . .	188
7.5.3	ac susceptibility measurements . . . . .	189
7.5.4	Discussion . . . . .	192
7.6	Conclusions . . . . .	192
	Bibliography . . . . .	193
	<b>General conclusions</b>	<b>197</b>
	<b>List of publications</b>	<b>199</b>
