INNOVATION DAY

Connecting emerging AI solutions with government, industry and investment to turn innovation into practical impact.

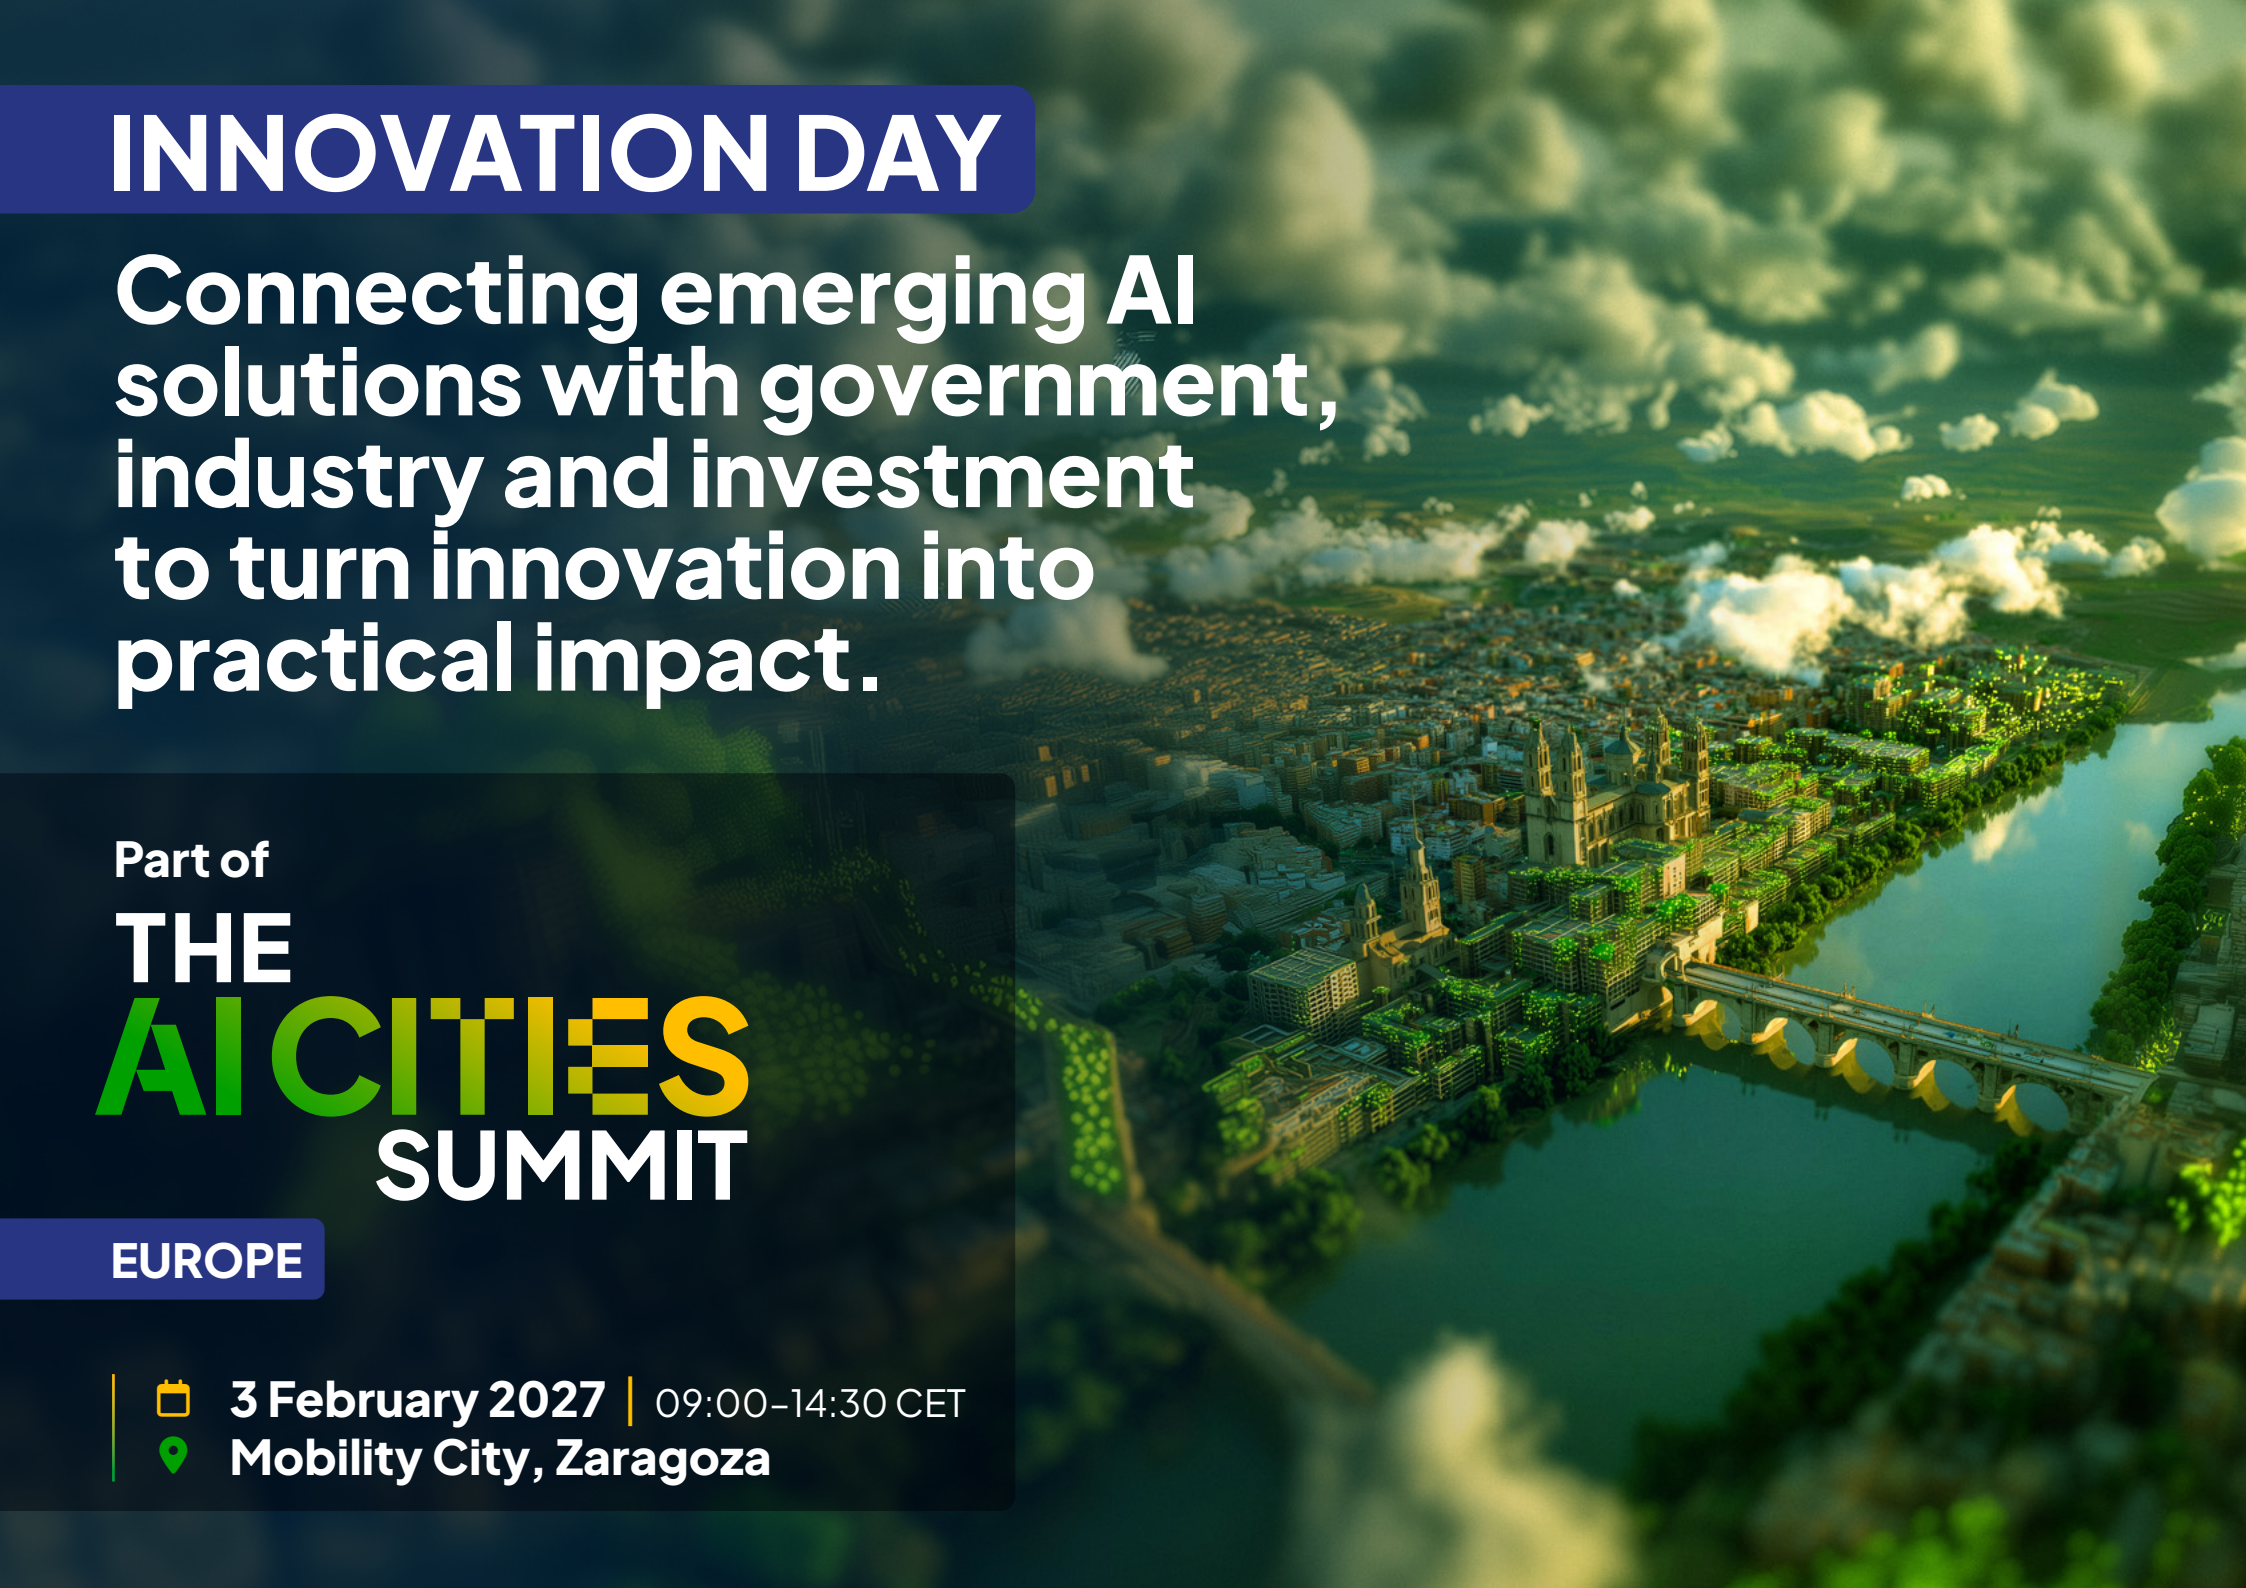

Part of

THE AI CITIES SUMMIT

EUROPE

3 February 2027 | 09:00–14:30 CET

Mobility City, Zaragoza

Connecting emerging AI applications with the needs of smart cities

THE AI CITIES SUMMIT

AI innovation is moving fast. For governments and industry, the challenge is to identify which applications can help build smarter cities, understand how they perform in practice and see where they can create lasting economic and societal value.

AI Cities Summit's Innovation Day will connect emerging AI businesses with leaders from government, industry and investment, bringing start-up innovation directly into the conversation about how AI can improve urban services, address practical challenges and support regional growth.

Through a curated programme of pitches, practical use cases and a closing investor panel, the day will showcase promising applications for smart cities, share lessons from implementation and explore the partnerships, investment and conditions needed to accelerate adoption and help businesses grow.

The format

Start-up pitches: Around five selected businesses presenting their AI solution, the challenge it addresses and its stage of development.

Practical use cases: Around three presentations showing how AI is being tested or applied, with insights into implementation and outcomes.

The investor lens: A closing panel exploring the investment considerations and commercial potential of emerging AI businesses.

Contribution will connect the programme with emerging innovation and give selected start-ups an opportunity to present to a senior audience.

The AI Cities Summit Europe | 3–4 February 2027, Palacio de Congresos, Zaragoza

The AI Cities Summit Europe Innovation Day

THE AI CITIES SUMMIT

Bring the innovation in your network to the stage. We invite accelerators, incubators, universities and innovation networks to put forward emerging AI businesses and practical use cases that can support the development of smarter cities.

Nominate a start-up

Nominate a business developing an AI solution for cities, public services or supporting infrastructure. We are looking for Seed to Series A businesses with products beyond the initial prototype stage and actively being tested, piloted or deployed.

Share a practical use case

Show how AI is addressing a defined challenge. Presentations should bring the application to life through implementation experience, results and practical lessons that others can build on.

What to share

- Company name, website and main contact
- A short description of the solution and the challenge it addresses
- Development or funding stage
- Evidence of active testing, piloting or deployment
- Proposed presenter

Our production team will review submissions based on relevance to the programme and stage of development.

Explore collaboration

Contact Chloe at **chloe.culver@aicitysummit.com** to submit your proposal or recommendation.

Bring your network's innovation to the stage.

Let's explore how we can shape Innovation Day together.

Seed or series A will be accepted

Seed: They've raised a cumulative €1M to €4M in capital, possess a functional Minimum Viable Product (MVP) and are showing early signs of Product-Market Fit (PMF), and financially range from micro-revenue up to €1M in Annual Recurring Revenue

Series A: The company is raising or has recently raised its first major institutional, priced VC round, typically sized between €4M and €15M, have established undeniable PMF backed by hard metrics, and have generally €1M to €3M+ ARR
